Exceptional Service from Concept to Completion

As a fully-integrated electrical contractor, Dynalectric San Diego offers complete design-build capabilities for new construction, renovations, and more. Design-build provides customers with a single point of contact for all phases of a project—engineering, construction, and finally post-construction.

Field-Tested Design-Build Experts

Our team consists of professional technicians, engineers, and construction experts who have been involved in many high-profile design-build projects. Our design-build approach engages all involved parties early, in an effort to improve communication, reduce conflict, and shorten project delivery times.

Leveraging State-of-the-Art Tools and Technology

Additionally, our design-build process also incorporates cutting-edge BIM and prefabrication. By integrating our BIM and prefabrication teams into the early stages of a project, we are better positioned to solve constructability issues before they become expenses, achieve aggressive project schedules, and continuously identify design improvements.

Adding Value at Every Phase of a Project

Design-build services can bring multiple benefits to a project, including:

- » Cost Savings Analysis with owner input and real-time budget data
- » Full project coordination, from design through construction
- » Concurrent design and construction to facilitate accelerated schedules
- » Continuous control of project costs
- » Single-source, one-stop solution for design, installation, and operation of systems, warranty, and service
- » Minimized delays and improved response time
- » Knowledge of systems and components from design phase allows for innovative application during installation phase
